

April 2017

GoodYear Motorsport is excited to announce that we will be returning to Formula SAE.

Our dry and rain tire will both be available in the size 20.0x 7.0-13.

The dry tire is the D-2704 and comes with our "FSAE" compound.

It was designed specifically to have grip right out of the box and build temperature quickly.

The new "FSAE" compound has increased grip from the previous version which allows the tire to come in faster.

The rain tire is the D-2703, it is available in our softest rain compound R065.

Both are built with the newest innovations yielding the fastest stickiest FSAE tire ever built.

The tire begins with a new carcass design using Aramid Technology. This keeps the bias tire more compact and keeps sizing consistent. The construction also keeps the tires performance in different ambient temperatures consistent.

For information about purchasing tires, please contact:

GoodYear Motorsport, Donatusstrasse 160, D-50259 Pulheim (Germany)

Tel.: +49 (0) 2234 9820315

Fax: +49 (0) 2234 84276
